Mr. James Quellow  
Acting Chairman  
Federal Communications Commission  
1919 M Street, NW  
Washington, D.C. 20554

Dear Mr. Quellow:

Recently I have received a number of letters from constituents expressing concern about proposed FCC rules changes, PR Docket 92-235. They fear that these changes, which affect the 72 - 76 MHz band, will negatively impact on the hobby of radio controlled modelling.

Radio controlled modelers currently share this frequency band with land mobile radio users. While these rule changes may benefit the land mobile radio users, safety concerns have been raised should the number of usable frequencies available to radio controlled modelers be diminished.

I would appreciate any information you could provide on this subject. I am particularly interested in learning if the FCC is taking any steps to ensure that all traditional users of this frequency band continue to have meaningful access. I would like to see that radio controlled modelers have ample frequencies available so that their hobby can be carried out in a safe and enjoyable manner.

I appreciate your prompt attention to this matter.

Sincerely,

  
Bernard Sanders  
Member of Congress
